

## **News Release**

December 8, 2006: For immediate Release

### **Next Generation X-ray Imaging System Contract Awarded**

Colorado Springs, Colorado - Salvador Imaging ([www.salvadorimaging.com](http://www.salvadorimaging.com)), an international supplier of high-performance digital cameras, announced today that it was awarded a contract in October of 2006 to design and manufacture cameras for a leading supplier to the veterinary, x-ray imaging market. The first year of the contract is valued at \$950,000 with the potential for significant follow-on volume over the next 5 years. Salvador's newly developed camera serves as the heart of the Merlin D-Rad™ digital radiography suite which eliminates the need for film in veterinary x-ray systems. In addition to eliminating the time and inconvenience associated with chemical film processing, the low-noise, high-resolution camera developed for this application allows veterinarians to capture sharper images with lower radiation doses, and increased efficiency.

According to Salvador's President, David Gardner, "We are excited about this product. In addition to giving the veterinarian a more accurate and reliable means of making a medical diagnosis, elimination of chemicals used in film processing will have a tremendous impact in reducing environmental waste."

### **About Salvador Imaging**

Salvador Imaging, headquartered in Colorado Springs, CO designs and manufactures high-performance digital imaging products for medical, industrial and military applications. Products and services include a line of standard products as well as custom image sensor and digital camera design. Profits from Salvador fund charitable activities through the Salvador Foundation.
